

GOAL 6: COMBAT HIV/AIDS, MALARIA AND OTHER DISEASES

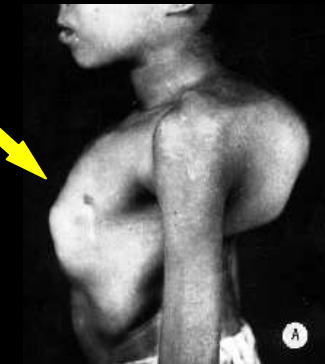

AIDS VIRUS

Every single day, 7 500 people are infected by HIV. Sub-Sahara-Africa is the most affected continent. Every year, Malaria (also called paludism) kills more than one million people, among which 80 % are children

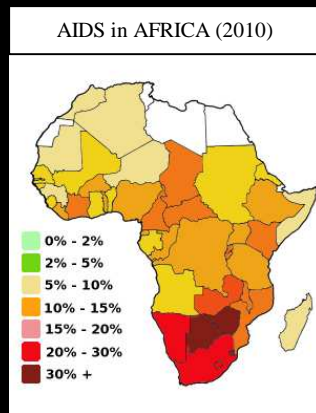

CHILD WITH MALARIA

CHILD WITH TUBERCULOSIS

TARGET 1: Decline of HIV and AIDS, decrease of the number of deaths and ill people, extension of their life span.

TARGET 2: Easy access to all available treatments against HIV and AIDS for all. These treatments have extended the life span of sick/infected people but too many people have not been treated yet: only 62 % in South America, 30 % in Subsaharian Africa and 14 % in Independent States.

TARGET 3: Tuberculosis still kills 1,7 million people every year and contaminates 14,4 million, a number increasing with the population. It now seems imposible to reduce by half the infection rate of tuberculosis by the year 2015 as some regions (such as Subsaharian Africa) are completely overwhelmed by the disease and as others (such as Oceania, South Eastern Asia) still show extremely high infection rate (between 264 in Eastern Asia to 521 per 100 000 inhabitants in Subsaharian Africa).

In ZIMBABWE:

In ZIMBABWE the AIDS virus has evolved and turned into a pandemia. ZIMBABWE's infection rate is the fourth highest rate in the world and most of the victims are children. A quarter of the population is HIV positive. Since 1990 this disease has considerably reduce life hope, which plummeted **from 61 to 33 years old!** Furthermore, ZIMBABWE is the south African country where AIDS victims receive the least financial support.

WHAT ABOUT US? WHAT DO WE DO AT SCHOOL?

ACTION FAIM has supplied vaccins, technical and medical staff, equipment and transport to inoculate thousands of children against diseases that can be avoided. ACTION FAIM has also given 60 000 insect-proof mosquito nets as well as millions of dosis of anti-paludic medicine..
